

## Managed Messaging Service

### Anti-Virus and Spam Management

Growing spam is a major issue for many organizations today. SOHO Solutions offers a managed services program that provides comprehensive protection for your E-mail against spam, viruses and other unwanted content while allowing legitimate E-mail through. This service reduces the load on your E-mail system and protects it by filtering out spam and malicious E-mail before it reaches your network. All of this is done without requiring on-site hardware.

Managed Messaging uses flexible, policy-based controls for attachment blocking, subject and message body filtering and encrypted file handling to protect your E-mail system against attacks and loss of confidential data. You can also designate senders who are allowed to bypass anti-spam filtering.

### Features:

- Real-time scanning of inbound and outbound messages uses flexible policies to quarantine messages containing viruses
- Setting up content filtering policies for attachment blocking, subject and message body filtering to block out unwanted messages before they reach your network
- Leverages high accuracy to enable customers to safely delete spam without review, eliminating the need to double-check quarantines for false positives.
- Message spooling ensures mail delivery in the event of a mail server or Internet connection outage.
- Sender Reputation and URL Filters
- 99.9999% Accuracy against false positives
- Mass Mailer Detection and Removal
- Signature Updates Every Hour

### An IT Partner, not just a Provider

Choosing SOHO Solutions as your IT partner will free up your time to focus on your business. Using pre-paid block hours will help you reduce IT labor costs required to keep your systems running.

SOHO Solutions will work with you to support your IT infrastructure and act as a true IT partner to help your business grow.

SOHO Solutions has been providing IT support and consulting services for small and mid-sized companies throughout the New York Metropolitan area since 1997.
